

DURRA

Studio Kits™

Durra is making it simple to build your own studio in that spare room or garage you have. A Durra DIY Studio kit made from environmentally friendly Durra Panel has superior acoustic performance for noise control. Features such as fire and impact resistance and demountability make Durra DIY Studios a durable and affordable kit. A simple to construct system that can be assembled in no time.

Durra Panel has over 40 years of proven performance and has been used in many Landmark projects in Australia and around the world.

The System

The Studio kit is based on a 1200mm modular grid. Internal walls and ceilings (height 2400mm) are constructed with a lightweight steel framework and high impact and fire resistant panels - Durra Panel. Studio kits are delivered flat packaged to site and are simple to construct with basic tools.

The Materials

Durra Panel is a densely compressed straw core panel encased with kraft liner paper. It is low in embodied energy and provides noise control, thermal insulating properties, impact resistance and emits virtually no volatile organic compounds (VOC's) contributing to the comfort and privacy of your living needs.

The Finish

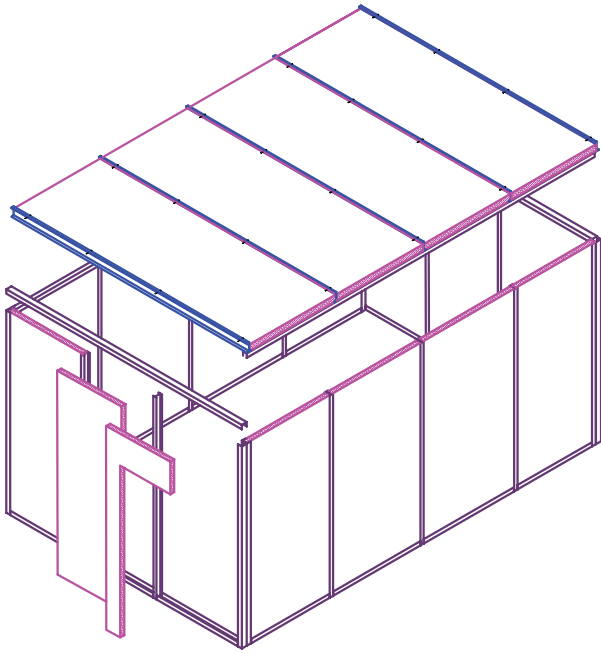

The face of Durra Panel is a Kraft paper liner which can be painted for a complete interior finish. Optional Acoustic Pattern finish is available for internal reverberation control.

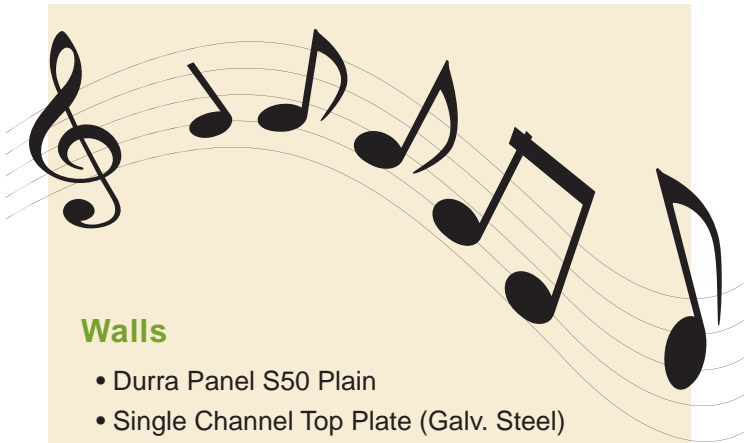

DOLBY 5.1 STUDIOS

CENTRAL CITY STUDIOS - DOCKLANDS

Exploded View: Typical Durra DIY Studio Kit
